

In Gen Z lingo, the term for a "Dummy PDF File" can be creatively expressed as: "Fakey Frakie Fakin' Fakey: A Giggly Ghost Town."

This phrase essentially means having something that looks like a legitimately useful document or file (a PDF in this case), but when you open it, it's either empty, not functioning as expected, or contains misleading information. It's playful and silly, just like Gen Z slang is often designed to be. So if someone shares a "Fakey Frakie Fakin' Fakey: A Giggly Ghost Town" PDF with you, don't take it too seriously as there might not be any valuable data within it.
